Re: Entry Level Software Development Position

Dear Hiring Manager:

I will be graduating from the BCIT Computer Systems Technology Program (CST) at the end of 2019 and seeking employment as a software developer. I consider your hiring me an exchange of mutual value and benefit. I will work hard once you bring me on to your team, harder than I have ever worked in my life. I will learn from you, and every day I will learn more, and make my hard work that much more effective every day I continue learning.
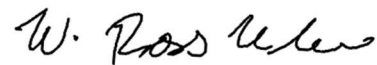

I am fluent in C#, .NET Framework, JavaScript/HTML/CSS, , Java, Oracle/mySQL, C, C++, and experience with GitHub and version control. I am also a talented and creative writer, and this allows me to express myself with deliberate clarity, and can lead me to creative solutions my peers have missed. I am not only eager to learn, I do so incredibly quickly. I am sharp and pick up on concepts and skills with little practice. I am a powerful blend of creativity and technical prowess.

Whenever I took a job in the restaurant industry I was immediately recognized and appreciated for my rock-solid reliability. I was always the one they never had to worry about not showing up; I was always the one they could call in to cover when others did not; I was always the one they could count on and never have to worry about for any reason whatsoever. This will translate for you as being someone you never have to question meeting targets and deadlines.

I have learned more than I imagined possible at BCIT, but I am also awed by how much there is still to learn out in the professional real world. I know that working with your company will be a mutually constructive and rewarding environment for me to contribute to and learn from.

Thank you for taking the time to read this letter. I look forward to meeting with you about this opportunity, and will make myself available for an interview whenever your convenience.

Sincerely,

W. Ross White
